

To-do return values

Create return values: [Menu: Administration ? Sales ? Product templates ? To-do templates](#)
Use return values: [Dashboard ? Show all to-dos ? Drag to-do to "Closed" column](#)

What

Return values are information that is requested when the to-do is completed. For example, one has the to-do template "Reserve table". The return value for this can be "Reservation time" or "Table number".

Edit to-do template

To-do

Name *

Where are return values defined?

Return values are generated in the product template when creating to-do templates.

1. Create your to-do template and save it.
2. A "Return values" area appears on the right
3. Click on the blue round "add button" and then double-click in the fields
 1. Name: Name of the return value
 2. Response type: Text, Number, Travel Guide (most of the time the return value is a text)
4. Click on the "Done" tick.

How are return values queried?

Return values are requested on the to-do board as soon as the to-do is dragged into the "Closed" column. The return values can be entered there and viewed again and again.

The image shows a to-do board interface with a modal window titled "Reserve table" open in the center. The modal contains the following information:

- Deadline:** Due since 361 days
- Dossier:** Dossier D1000006.100 - One week tour through switzerland (Offer Incoming)
- Product:** Restaurant Salzano Interlaken 07/03/2022, 16:00 - 07/03/2022, 20:00
- Reservation time:** [Input field]
- Table number:** [Input field]

At the bottom of the modal, there are "Cancel" and "Save" buttons. The background shows a to-do board with various items like "Tour Booking", "Message Booking", "test", "NO public", "Guide request availability", "Follow-Up Service Catalog", "Book a guide", and "Reserve table". A "Chat with us" button is visible in the bottom left corner.
